What is Plagiarism?

- Plagiarism is derived from the Latin word “Plagiarius” meaning “kidnapper”. Plagiarism means stealing or copying another’s work and representing it as own work. On Internet, everything is available for free. We can share, upload, download, view, or search any text, audio, and video. Everything is there for free. The availability of anything and everything on the internet has made our lives easier but people make misuse of this advantage of the internet by representing other’s work as their own for fame, for academic benefits, for money, for personal interests, etc.

INTRODUCTION

- Plagiarism is most commonly practiced in academics and researches. On the internet, we have all kinds of literary articles, educational content, research papers, etc available for free. This facilitates everyone and assists them in gaining knowledge and becoming literate. Earlier when there were no Internet people either had to visit libraries when they wanted to study or know anything or had to purchase expensive books. But now we just type the topic in our browser and we get thousands of search results. As a result, some people use these articles, research papers, educational content in an adverse manner.

CONCEPT

Plagiarism can be intentional or unintentional. We should have the knowledge of what can be called plagiarized content and what not. Following are the key points to understand what can be called as plagiarism:

1. If we use another person's work under our name.
2. If we copy other's ideas and words and don't give them the credit.
3. If we download copyrighted images or music and present them as our own.
4. If we copy maximum words and modify them so that we can cleverly use them under our own name.
5. If we use someone else's copyrighted music or video for our own music cover or video.
6. If we recreate an image, video, music, article, etc in such a manner that it is quite similar to the original one.

Types of Plagiarism

1 Complete Plagiarism:

- Complete Plagiarism is the most extreme form of plagiarism. In this plagiarism, a person completely copies someone else's work such as a research paper, article, image, etc, and represents it as their own work. This form of plagiarism is similar to identity theft or stealing.

- **2 Verbatim:** Verbatim is also known as direct plagiarism. When we read a book we must have observed that if any statement that a famous person has made is always represented in double quotations and is highlighted so that we get to know that it is said by this particular person. Similarly consider a person writing an article and mentioning someone's else work or words that too exactly the same. But this person doesn't represent it in quotation marks. Then that person is said to be exhibiting direct plagiarism. Hence copying another person's work word to word and not representing it in quotation marks is known as Verbatim or direct plagiarism.

- **3 Self Plagiarism:**

- This kind of plagiarism is the duplication of a person's own work. It is also known as auto plagiarism. It occurs when a person copies some words of his own published work and uses the same for another work. This form of plagiarism is commonly observed in research journals.

- **4 Source-Based Plagiarism:**

- This form of plagiarism is most commonly observed in research work. In the research paper one needs to provide references that have contributed to their work, If a person provides wrong references that do not exist, or that are not relating to the work then it is known as source-based plagiarism.

Why is plagiarism unethical?

- Plagiarism is unethical because we are representing someone's other work as our own without giving them the right to. In the real world if someone else takes our things without our permission then we call that person a "thief" and doing so is considered as a punishable offense. Similarly if in the virtual world someone copies someone else's work it is unethical and is a punishable offense.

How to avoid plagiarism?

- Always give credit to the person whose work you are including in your own work. Make use of double quotations to prevent verbatim.
- Build your own ideas and thoughts and use them in your work. Do not copy another person's ideas or work. Develop yourself and work on yourself so that you can enhance your thought process. Increase the domain of your knowledge.
- Make use of paraphrasing. Paraphrasing means the representation of an idea or thought in our own words in such a manner that the original essence of that idea remains the same.

How to avoid plagiarism?

- Use online plagiarism checker tools. There are many sites that offer plagiarism checker tools.
- Always provide correct references in your research paper or article.
- Learn how to cite your articles, provide references, use double quotations, etc
- If you are using someone else's videos, images, or audios in your own video, etc always ask them first, and even after that provide them the credit for the same.
