Subject: Introduction to psychology
Roll No: SP21379
Department: Software engineering
Section: BSSE-III-A-afternoon
Submission date.....1st June, 2023

Self-profile:

Intelligence quotient:

linguistic intelligence	13
Logical-mathematical intelligence.	19
Musical intelligence.	13
Spatial intelligence.	17
Bodily-kinaesthetic intelligence.	18
Interpersonal intelligence.	12
Intrapersonal intelligence.	18

Linguistic intelligence.

As expected in linguistic intelligence I am very weak and I was expecting about 15 marks in Linguistic, at school time, studies in my native language were easy for me, and I can understand conceptual topics in my native language easily.

Logical-mathematical intelligence.

As I aspect, I got accurate marks in the logical activity, I got 19 as expected, I can solve complex logical problems and am good at mathematics. As expected in actuality I got the highest marks in logical-mathematics intelligence.

Musical intelligence.

I don't like all types of music, as in the first statement after hearing a tune once or twice I am not able to sing or memorize.

Spatial intelligence.

I am pretty good at spatial intelligence. I can form illustrative pictures or designs in my mind and it is easy for me to conceptualize complex patterns. I can solve steps of mathematical problems in my mind first before proceeding.

Bodily-kinaesthetic intelligence.

My scores in bodily-kinaesthetic intelligence suggest that I have good visual-spatial skills and coordination, and may enjoy activities such as building, or sports. I am good at handicrafts and I love it.

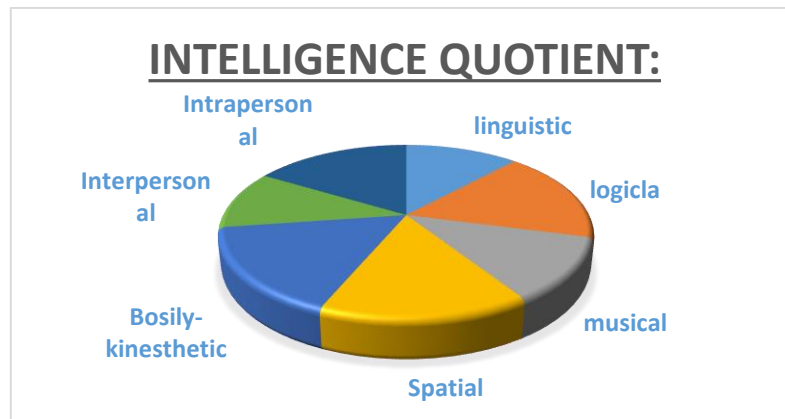

Interpersonal intelligence.

Sadly I am very poor in connecting with new people, and friends. My score in interpersonal abilities suggests that I have difficulties to understand and connect with others. This may involve developing my communication skills, as well as learning how to listen actively, build rapport, and establish trust with others.

Intrapersonal intelligence.

I was not expecting 18 scores in intrapersonal intelligence, I was expecting some points less than the actual score any way my score in intrapersonal intelligence suggests

that I have a strong understanding of my own emotions, motivations, and goals. I may be reflective, introspective, and able to identify my own strengths and weaknesses.

Emotional quotient:

Self-awareness	42
Managing emotions	39
Motivating oneself	36
Empathy	42
Social Skill	32

Self-awareness and empathy:

Basically, I am an intro personality and I do self-reflect every day that is why I have a high level of self-awareness and empathy. My scores in these areas suggest that I am generally aware of my own emotions and how they may impact others and that I am able to understand and appreciate the perspectives and feelings of others.

Managing emotions:

My score in managing emotions suggests that I may have some difficulty regulating my emotions in certain situations. I was expecting a more than 40 score but I obtain less than 40 so my expectation is not to meet the actual score. I thought I am quite good at managing emotions.

Motivating oneself:

In motivating myself I scored 36 which is I think not good as I expected. I was expecting more in motivating myself but in actuality, it was less. So my score in motivating myself suggests that I have difficulties in motivating myself.

Social skill:

Finally, as expected my score in social skills suggests that I am very weak in social skills. As I expected in social skills I have a minimum score in the test because I know I have difficulties with social skills.

Overall, it's important to remember that emotional intelligence is a complex and multi-dimensional concept and that a single test score may not provide a complete picture of my emotional intelligence or potential for growth.
