

JavaScript lab tasks

Q1 Create following

a) Create and trigger simple alert

b) create following

Q2. The html file should have a table with 4 data cells, each with an image in it. Each image should, when clicked on, call its own function in your .js file such that an alert box pops up saying what image you clicked on.

Q3 Either in separate html and .js files or the same ones you've been using, you should have a javascript that asks the user, "what kind of candy do you like?" using the prompt box. The function should then use if condition or switch statement to print out what your favorite candy says about you as follows:

1. Snickers -> You don't fit into a box. You like to travel and read as much as TV and sports.
2. MilkyWay-> You know what to say and when to say it.
- 3 Musketeers -> You read long books
- 4 Butterfingers->your favorite show is the Simpsons
5. Candy Corn ->you probably need books

Q4 Create following

Part A:

Write a JavaScript program that prompts the user to enter two integers. Once obtained, the program outputs HTML text displayed in the browser indicating which number is greater than the other. If the two numbers are equal, it displays the message "The two numbers are equal". The text must be displayed within `<h1>` tags.

Part B:

Modify the JavaScript program done in Part A by changing the way output is displayed. In this part, you are expected to output the same text in an alert window.
