Subject: HCI

Department: BSSE-V-Afternoon

Date: 15-12-2024

Question 1 :

Scenario:

A university plans to introduce a mobile app to help students manage their academic schedules, assignments, and reminders more effectively. The app will have the following features:

1. A dashboard showing the day's classes and tasks.
2. A calendar where students can view and manage deadlines and exams.
3. Notifications for upcoming deadlines or events.

Task:

Using an online storyboarding tool (such as Storyboard That, Canva, or Miro), create a 4-panel storyboard illustrating the user's journey through the app.

Key Steps to Include:

1. A student launches the app to check their schedule.

2. They open the calendar to review upcoming deadlines.

4. The app sends a notification before the deadline, helping the student complete the task on time.

Question 2 :

Scenario:

You are designing a mobile app for a library that enables users to:

1. Search for books by title, author, or genre.
2. Reserve books that are currently available or place a hold on those checked out.
3. View a reservation confirmation screen with pickup details.

Task:

Create 2-3 wireframes to represent the following screens:

1. Search screen: A user-friendly interface with a search bar, filters (e.g., genre, author), and a list of book results.

2. Reservation screen: A clear layout where users can see book availability, reserve a book, and select a pickup date.

3. Confirmation screen: A summary of the reserved book(s) with pickup details and a confirmation message.
