

Outline

- Website and app development
- Information architecture
- Navigation design

Website and App Development

- Website design with clear objectives
- Gradual increase in content
- Navigation is the key concern
- Apps are specific
- Navigation design (for apps) is relatively easier

1. Stakeholder Identification

Restaurant Employees

Food Shelter Workers

2. Social Interaction for Interface Design

Guided Interviews

Ethnographic Studies

4. Design Evaluation by Stakeholders

Questionnaires & Discussions

5. Final App Design Screens & Flow of SeVa App (Partial Snapshots)

Food Consumer Form:

- Time Available For Pick Up
- Food Required
- Allergy Disclaimer Or Dietary Needs
- Quantity Needed
- Food needed by
- Address
- Submit

Food Supplier Form:

- Food Item
- Time to Pick Up
- Storage Method
- Location
- Submit

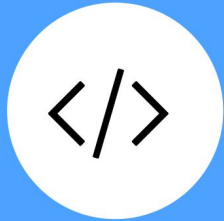

3. Conceptual Design Construction Wireframe Design of SeVa App (Partial Snapshots)

Information Architecture of Apps and Websites

- How content is classified and organized
 - Structures, categories, and collections
 - Different objectives and users
 - Challenging task
- 

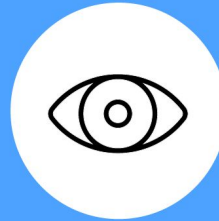

8 principles of information architecture

OBJECTS

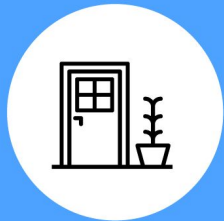

CHOICES

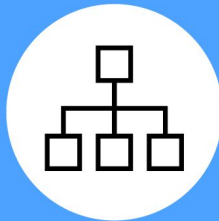

DISCLOSURE

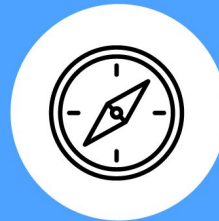

EXEMPLARS

FRONT DOORS

MULTIPLE CLASSIFICATIONS

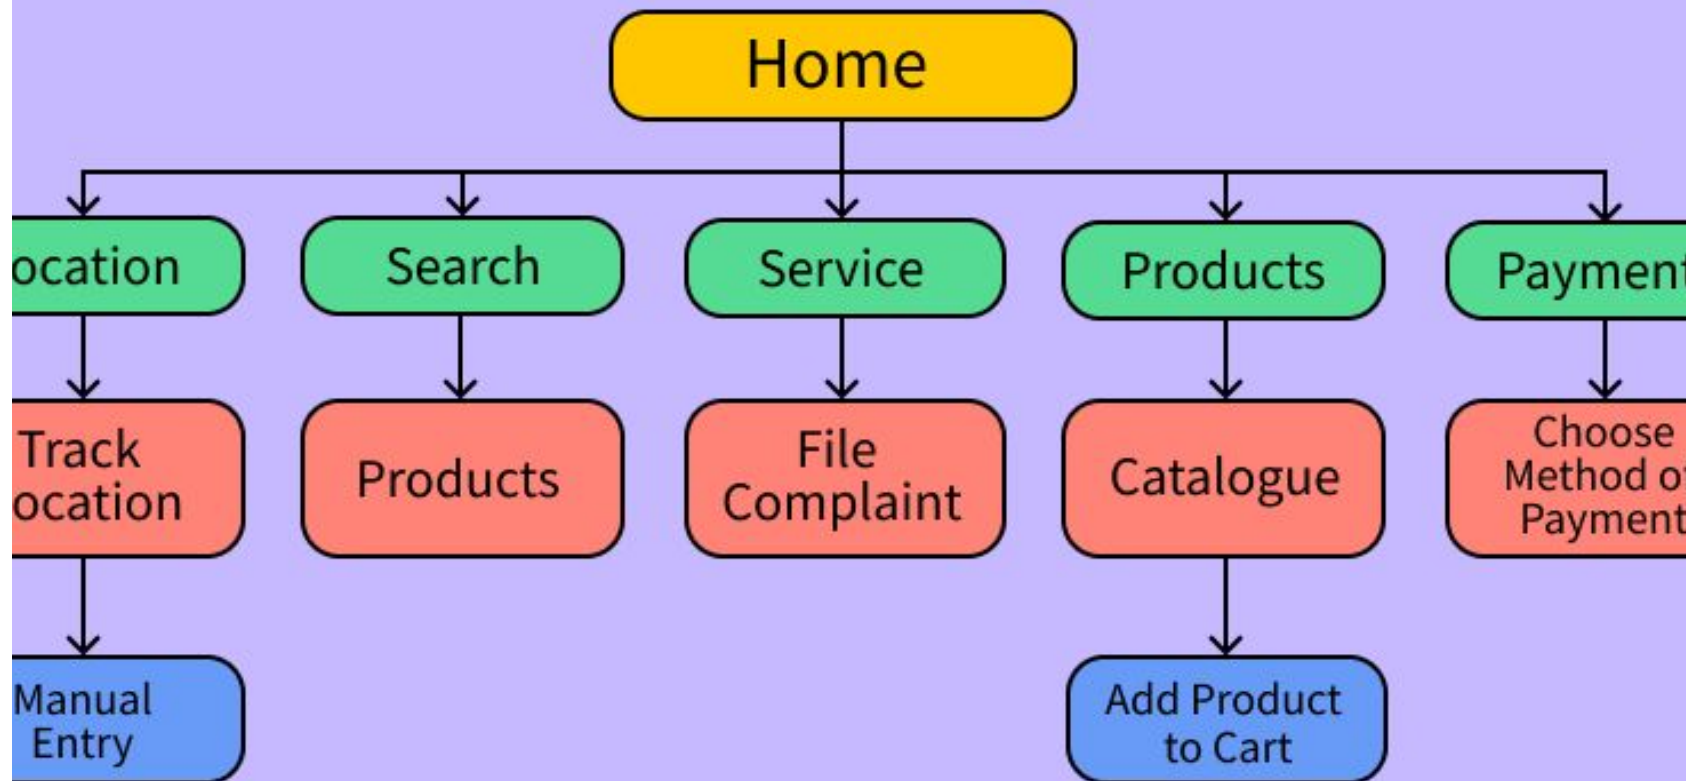

FOCUSED NAVIGATION

GROWTH

Information Architecture for an E-Commerce Website

Classification Schemes

- Also called ontology
- Choice of ontology is critical
- Exact schemes
 - Alphabetical, chronological and geographical
- Ambiguous schemes
 - Subjective
- Alphabets, locations, time, continuums, numbers, categories, randomness

Faceted Classification

- Website can be described in terms of dimensions, facets, and values
- Consider a travel website
 - Dimensions: Cars, flights, hotels
 - Facets: price, origin/destination, locations
 - Values: Name of city and airport
- Suitable for small and clearly defined spaces

Organizational Structures

7

- Different structures are possible

- **Hierarchical structure**

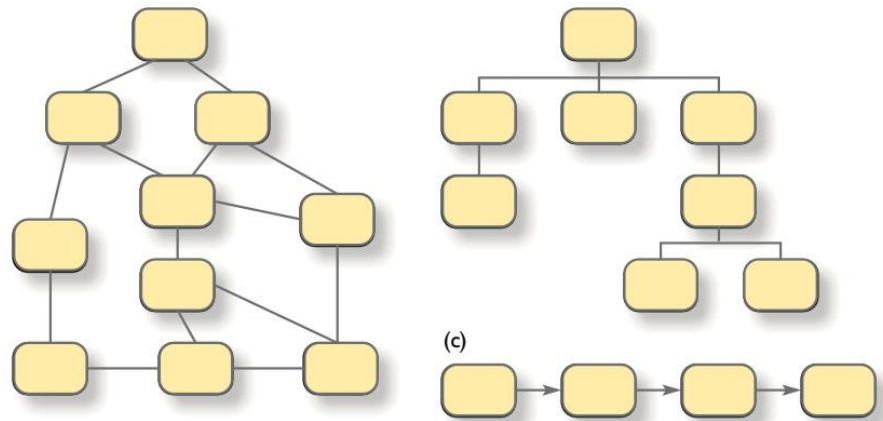

upside-down tree

- **Network structure**

Sometimes confusing

- **Sequence structure**

Straightforward task

Metadata

- Data about the content
 - Used by search engines
- Three types of metadata
- Intrinsic
 - Technical details
- Administrative
 - Author name, revision
- Descriptive
 - Classification

Navigation Design

- Labelling, navigation support and
- searching mechanisms
- Expert vs novice users

Labelling

- Internal / external links, headings, subheadings
- Text and iconic labels
- Unambiguous vocabulary
 - Products vs items
- Navigation support
 - Signs and labels
 - Global navigation bar
 - breadcrumbs

Searching

- Significant feature of information space
- Search engines
- Preferred vocabulary
- Problems
 - Types of documents to be searched
 - Search criteria
