Q1: Write code for to establish database connection in asp.net application

```
namespace my_app
{
    public partial class Form1: Form
    {
        public Form1()
        {
            InitializeComponent();
        }

        private void add_Click(object sender, EventArgs e)
        {
            String address = "Data Source=(LocalDB)\\MSSQLLocalDB;Initial
Catalog=STUDENT;Integrated Security=True";

            SqlConnection con = new SqlConnection(address);

            con.Open();
            SqlCommand cmd = new SqlCommand("INSERT INTO std_record (ID, FIRST_NAME,
LAST_NAME) VALUES ('"+id.Text+"', '"+fname.Text+"', '"+lname.Text+"') ", con);

            cmd.ExecuteNonQuery();
            MessageBox.Show("Data Inserted Successfully");
            con.Close();
        }

        private void view_Click(object sender, EventArgs e)
        {
            String address = "Data Source=(LocalDB)\\MSSQLLocalDB;Initial
Catalog=STUDENT;Integrated Security=True";

            SqlConnection con = new SqlConnection(address);

            con.Open();
            SqlCommand cmd = new SqlCommand("select * from std_record ", con);
            var data = cmd.ExecuteReader();
            DataTable dt = new DataTable();
            dt.Load(data);
            gridview.DataSource = dt;

            con.Close();
        }

        private void update_Click(object sender, EventArgs e)
        {
            String address = "Data Source=(LocalDB)\\MSSQLLocalDB;Initial
Catalog=STUDENT;Integrated Security=True";

            SqlConnection con = new SqlConnection(address);

            con.Open();
            SqlCommand cmd = new SqlCommand("UPDATE std_record SET FIRST_NAME='" +
fname.Text + "', LAST_NAME='" + lname.Text + "' WHERE id = '" + id.Text + "' ",
con);
```

```
cmd.ExecuteNonQuery();  
MessageBox.Show("Data updated Successfully");  
con.Close();  
    }  
}
```

Output screenshots

form

The screenshot shows a Windows application window titled "Form1". The window has a standard Windows title bar with minimize, maximize, and close buttons. Inside the window, there is a button labeled "button" at the top left. Below it, there are three text input fields labeled "ID", "First name", and "Last name". The "Last name" field has a blue cursor. At the bottom left, there are three buttons labeled "add", "update", and "view". On the right side of the form, there is a large, empty gray rectangular area.

View

The screenshot shows a Windows application window titled "Form1". On the left, there are three text input fields labeled "ID", "First name", and "Last name". Below these fields are three buttons: "add", "update", and "view". The "view" button is highlighted with a blue border. To the right of the input fields is a table with four columns: an empty column, "ID", "FIRST_NAME", and "LAST_NAME". The table contains five rows of data. The first row is highlighted in blue. Below the table is a grey rectangular area.

	ID	FIRST_NAME	LAST_NAME
▶	1	hassan	ali
	2	sami	waheed
	3	hgh	gfgf
	2	sami	waheed
	23	akhter	ali
*			

For insertion

This screenshot shows the same "Form1" application window. The "ID" field now contains the value "4", the "First name" field contains "hassah", and the "Last name" field contains "ali". The "add" button is highlighted with a blue border. A small dialog box is overlaid on the bottom right of the window, displaying the message "Data Inserted Successfully" and an "OK" button. The table on the right remains the same as in the previous screenshot.

	ID	FIRST_NAME	LAST_NAME
▶	1	hassan	ali
	2	sami	waheed
	3	hgh	gfgf
	2	sami	waheed
	23	akhter	ali

For update

Form1

button

ID

23

First name

ahmed

Last name

hussain

add

update
