PROCESS MAPPING-SWIM LANE DIAGRAM

DR. NARGIS FATIMA

ASSISTANT PROFESSOR

DEPARTMENT OF SOFTWARE ENGINEERING , FEC

Agenda

- Swim lane diagram

Swim lane flow

A swim lane flow process map, also known simply as a swimlane diagram, is a visual representation of a process flow that divides the steps or activities among different lanes, typically representing different individuals, departments, or stages in a workflow

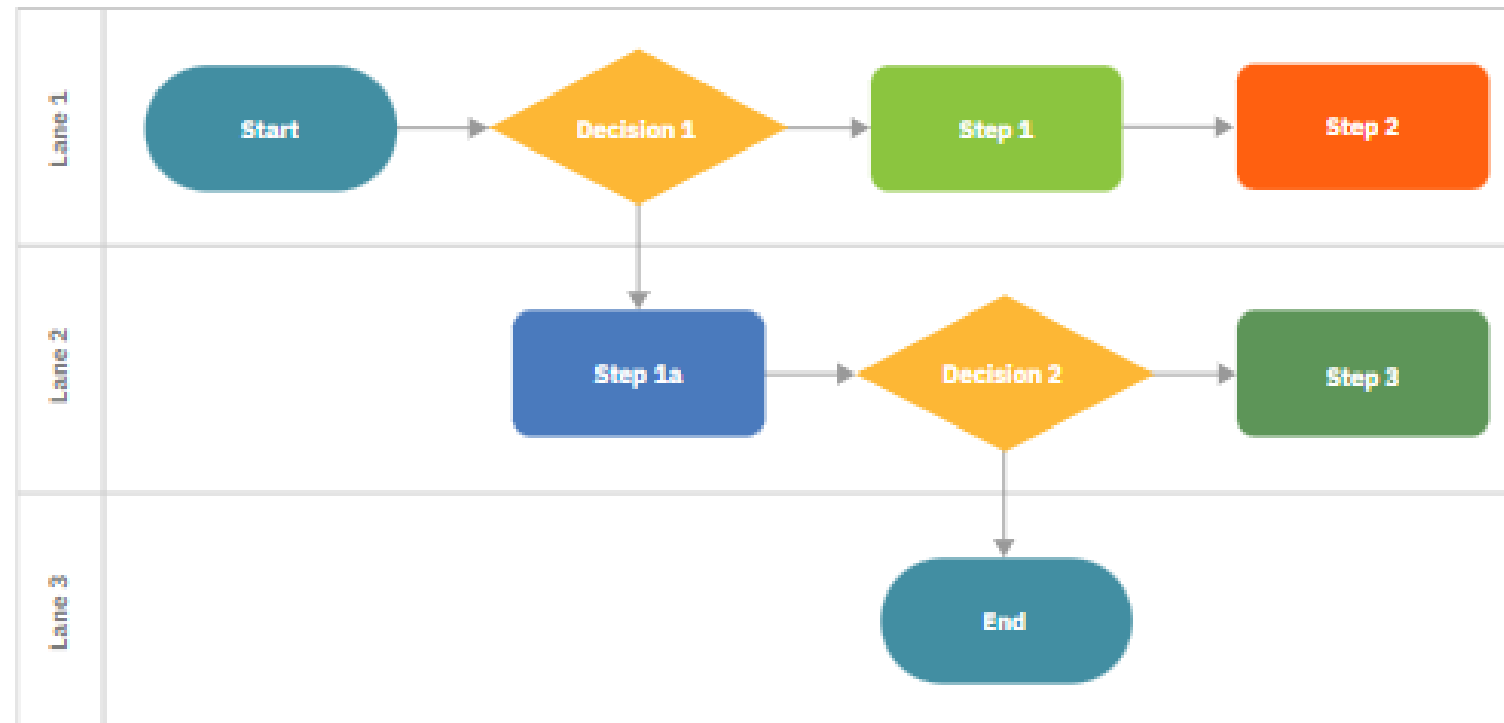

Swim lane flow

A swim lane diagram is a type of flowchart that outlines who does what in each process. Based on the analogy of lanes in a pool, a swim lane diagram places process steps within the horizontal or vertical “swim lanes” of a particular department, work group or employee, thus ensuring clarity and accountability

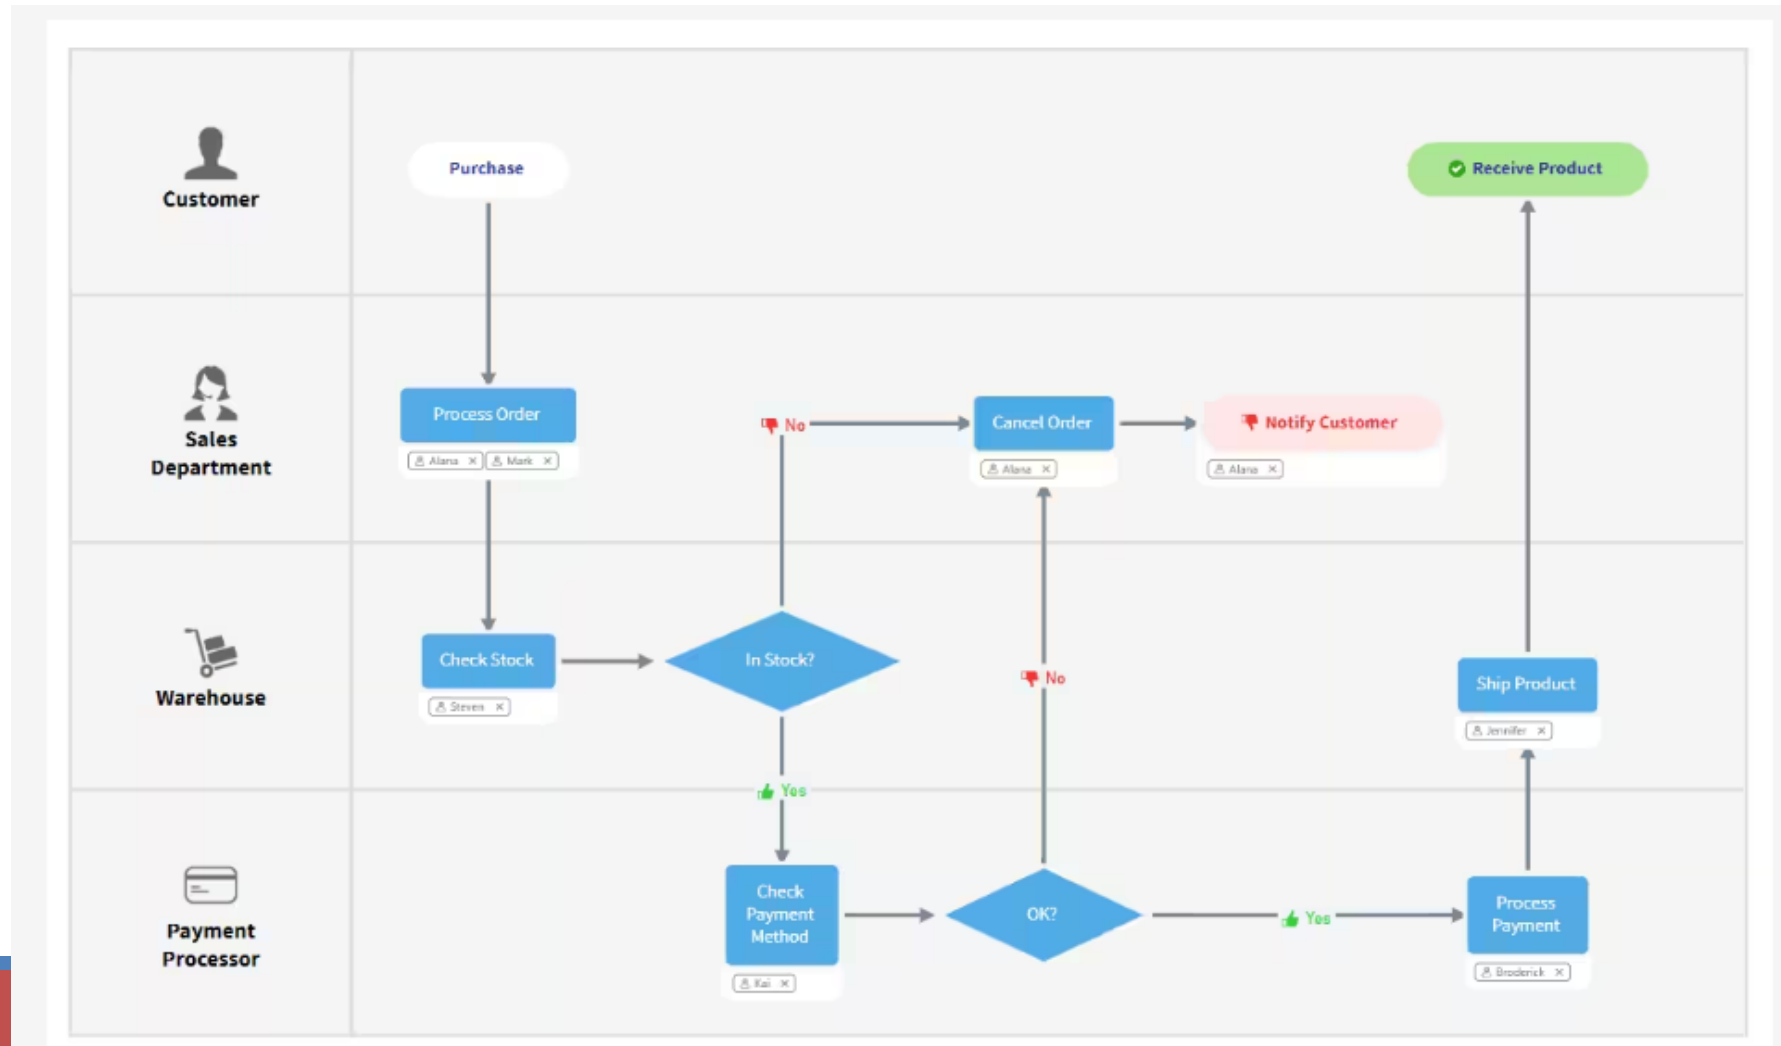

Swim lane Flow

also known as a cross-functional diagram (with swimlanes being called “functional bands”) or a Rummler-Brache diagram, after the authors who developed the first model. In 1990, Geary Rummler and Alan Brache documented the concept of swim lane diagrams in their work “Improved Processes”
