Assignment # __03__

Subject: ____IICT____

Submitted to: Talal bin Afzal

Submitted by: Zulqarnain Hassan (Roll #SP21379)

Class: BSSE-1- Afternoon

Section: __A__

Productivity applications

A large organization commonly referred to as an enterprise, requires special computing solutions because of its size and geographic distribution

Human resources software

Human resources software is a digital solution that combines several systems and processes to manage and optimize daily HR tasks and overall HR goals of a given organization

Accounting software

Accounting software is a computer program that assists accountants in recording and reporting a firm's financial transactions. Different firms have different accounting software needs. Some may only need generic, off-the-shelf accounting software, while others will need customized, complex accounting software.

Sales software

Sales software includes everything you need for sales productivity and optimization on a single platform. It facilitates the lead generation and tracking, easy-to-use sales automation, and allows for lead scoring to understand how each area of your sales cycle is performing.

Distribution software

Distribution software is an all-in-one solution designed to provide easier integration and up-to-date information. This can be accessed across all involved departments, ensuring that everything is in sync in terms of schedule and other important deadlines and success metrics.

Engineering or product development software

Software product development is a repetitive logical process that aims to build a programmed software product to mark a unique personal or business goal, process, or objective. It is mostly a planned strategy that comprises various stages or steps that result in the creation of an operational software product.

Manufacturing software

Manufacturing software is a tool that provides functionality to plan and execute projects from beginning to end while automating materials planning, production tracking, and scheduling, and product lifecycle management

Customer service software

Customer support software is a unified multiple channels tool that helps you communicate with customers, organize and keep track of tickets, and troubleshoot customer requests effectively to deliver better customer support service experiences.

Marketing software

Marketing software refers to tools that help businesses successfully execute campaigns, tap into their target markets and convert leads into sales. Companies, regardless of size, can benefit from marketing tools, allowing them to maximize their resources and get rid of repetitive tasks.

Software for information technology staff

Personal interest applications

Personal applications include things like word processing, spreadsheets, and presentation software. Workgroup applications include electronic communications and scheduling

Lifestyle applications

A lifestyle app accelerates or supports the individual facets that define your lifestyle. By this, I mean those types of mobile apps related to Fitness. Dating. Food.

Medical applications

Software developed for medical purposes, including a home medical monitoring systems, medical databases for healthcare professionals, etc

Entertainment applications

Entertainment apps comprise a wide range of interactive activities from purely leisure apps (music, playing games) to communication apps (social media, streaming media, instant messaging)

Convenience applications

Convenience is one of the most critical aspects of a mobile app. The app is there to make things easier for the customer and not harder. So you need to think about whether your mobile app is going to do this for your customer

Education applications

An Education Application Platform is the integration of learning management systems and technologies to provide a customized, end-to-end, education solution.

Communication applications

Blog

A blog (a shortened version of “weblog”) is an online journal or informational website displaying information in reverse chronological order, with the latest posts appearing first, at the top. It is a platform where a writer or a group of writers share their views on an individual subject

Browsing

Browsing is the act of looking through a set of information quickly, without a specific sense of purpose. In the context of the internet, it usually refers to using the world wide web. The term may imply a sense of aimlessness, with the user just wasting time on the internet.

Chat

A messaging app is a chat application or platform that enables users to instant message and connect with each other through their computers or mobile devices. Think Facebook Messenger, WhatsApp, etc.

Online Discussion

Online discussions occur when an instructor uses software to encourage conversations among students and/or instructors via the internet around a specific topic.

Email

Gmail is among the most-used email platforms for business purposes. For emails, its predictive text feature analyzes your messages to suggest possible phrases. This allows you to write emails in less time while maintaining a natural tone. Adding documents and images into the body of your Gmail message is also easy.

File transfer

A file-sharing application is a software application that facilitates collaboration and file transfer. File-sharing applications allow end-users to upload files to shared storage space and designate who may access the files. Workplace file sharing applications fall into two major groups: consumer and business-grade.

Internet Phone

If you're not calling a landline or mobile phone number, most communication apps provide app-to-app internet callings, such as Google Duo, Messenger, Slack, Snapchat, Whatsapp, and Zoom. Most of these services let you video chat for free too

Instant Messaging

Instant messaging (IM) is a form of text-based communication in which two persons participate in a single conversation over their computers or mobile devices within an Internet-based chatroom.

Mobile Messaging

A messaging app is a platform that allows the user to send and receive messages in real-time. While traditional text messages require a mobile network, instant messaging apps function over the internet

Video conference

As the name suggests, video conferencing software is software that allows two or more people to emulate a person-to-person meeting over the internet using real-time, multidirectional video and audio streaming.

Web Feeds

A web feed is a data format used for providing users with frequently updated content. Content distributors syndicate a web feed, thereby allowing users to subscribe to it. Making a collection of web feeds accessible in one spot is known as aggregation, which is performed by an Internet aggregator.
