Objectives

1. Revise Database concepts in MySQL
2. Apply pagination on PHP Database

Description

PHP Pagination

PHP is mostly used to store and display data from a database. Pagination can be done with ajax, but here this is done with non-ajax. In this tutorial, we will learn the pagination in PHP with MySQL. Let's take a brief review about pagination with an example. Pagination is a common task for PHP developers. MySQL helps the developer to create pagination by using LIMIT clause, which takes two arguments. The first argument as OFFSET and the second argument is number of records that will return from database.

Code

Db.php

```
<?php
$host = "localhost";
$user = "root";
$pass = "";
$db = "taskManager";

$conn = new mysqli($host, $user, $pass, $db);

if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}
?>
```

Index.php

```
<?php

include "db.php";

$limit = 10;

$page = isset($_GET['page']) ? (int)$_GET['page'] : 1;
if ($page < 1) $page = 1;

$start = ($page - 1) * $limit;

$sql = "SELECT * FROM tasks LIMIT $start, $limit";
$result = $conn->query($sql);
```

```
$countResult = $conn->query("SELECT COUNT(*) AS total FROM tasks");  
$row = $countResult->fetch_assoc();  
$total_records = $row['total'];
```

```
$total_pages = ceil($total_records / $limit);  
?>
```

```
<!DOCTYPE html>  
<html>  
<head>  
  <title>Tasks Pagination</title>  
  <style>  
    body { font-family: Arial, sans-serif; padding: 20px; }  
    table { width: 60%; border-collapse: collapse; margin-bottom: 20px; }  
    th, td { border: 1px solid #ddd; padding: 10px; text-align: left; }  
    th { background: #f4f4f4; }  
    .pagination a {  
      display: inline-block;  
      padding: 8px 12px;  
      margin: 2px;  
      border: 1px solid #ddd;  
      text-decoration: none;  
      color: #333;  
    }  
    .pagination a.active {  
      background: #007bff;  
      color: white;  
      border: 1px solid #007bff;  
    }  
    .pagination a.disabled {  
      color: #aaa;  
      pointer-events: none;  
    }  
  </style>  
</head>  
<body>  
  
<h2>Task List (Page <?php echo $page; ?> of <?php echo $total_pages; ?>)</h2>  
  
<table>  
  <tr>  
    <th>ID</th>  
    <th>Task Name</th>  
  </tr>  
  <?php while ($task = $result->fetch_assoc()) { ?>  
    <tr>
```

```
<td><?php echo $task['id']; ?></td>
<td><?php echo $task['task_name']; ?></td>
</tr>
<?php } ?>
</table>

<div class="pagination">

<?php if ($page > 1) { ?>
  <a href="?page=<?php echo ($page - 1); ?>">Previous</a>
<?php } else { ?>
  <a class="disabled">Previous</a>
<?php } ?>

<?php for ($i = 1; $i <= $total_pages; $i++) { ?>
  <a href="?page=<?php echo $i; ?>" class="<?php if ($i == $page) echo 'active'; ?>">
    <?php echo $i; ?>
  </a>
<?php } ?>

<?php if ($page < $total_pages) { ?>
  <a href="?page=<?php echo ($page + 1); ?>">Next</a>
<?php } else { ?>
  <a class="disabled">Next</a>
<?php } ?>
</div>

</body>
</html>
```

Output

Task List (Page 1 of 5)	
ID	Task Name
1	Prepare Presentation
2	Fix Login Bug
3	Database Backup
4	Write Project Report
5	Team Meeting
6	Update Project Documentation
7	Review Pull Requests
8	Optimize SQL Queries
9	Client Follow-up Call
10	Deploy to Staging Server
Previous 1 2 3 4 5 Next	

Task List (Page 2 of 5)

ID	Task Name
11	Test New Features
12	Design Homepage UI
13	Security Audit
14	Debug API Endpoints
15	Monitor Server Performance
16	Create REST API
17	Check Error Logs
18	Write Unit Tests
19	Training Session with Team
20	Update Dependencies

[Previous](#) [1](#) [2](#) [3](#) [4](#) [5](#) [Next](#)

Task List (Page 3 of 5)

ID	Task Name
21	Plan Sprint Tasks
22	Create Wireframes
23	Code Refactoring
24	Review Test Cases
25	Check Network Configuration
26	Fix UI Responsiveness
27	Write Blog Post
28	Demo for Client
29	Data Migration Task
30	Check System Security Patches
