Topic:	Working with jQuery + Ajax
Date:	23/09/2025

Objectives

- Introduce jQuery concepts
- Introduce Ajax concepts
- Apply pagination on PHP Database

Description

jQuery

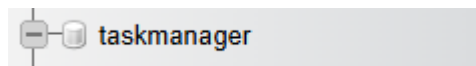

jQuery load() Method The jQuery load() method is a simple, but powerful AJAX method. The load() method loads data from a server and puts the returned data into the selected element. Syntax Syntax: \$(selector).load(URL,data,callback);

Code

Creating Database

```
CREATE DATABASE IF NOT EXISTS taskManager;
```

```
USE taskManager;
```

Creating Table

```
CREATE TABLE tasks (  
    id INT AUTO_INCREMENT PRIMARY KEY,  
    task_name VARCHAR(255) NOT NULL  
);
```

Insert Task

```
INSERT INTO tasks (task_name) VALUES  
(  
'Prepare Presentation'),  
(  
'Fix Login Bug'),  
(  
'Database Backup'),  
(  
'Write Project Report'),  
(  
'Team Meeting'),  
(  
'Update Project Documentation'),  
(  
'Review Pull Requests'),  
(  
'Optimize SQL Queries'),
```

Db.php

```
<?php
$host = "localhost";
$user = "root";
$pass = "";
$db = "taskManager";

$conn = new mysqli($host, $user, $pass, $db);

if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}
?>
```

Tasks.php

```
<?php
```

```
include "db.php";

$limit = 10;
$page = isset($_GET['page']) ? (int)$_GET['page'] : 1;
$offset = ($page - 1) * $limit;

$sql = "SELECT * FROM tasks LIMIT $limit OFFSET $offset";
$result = $conn->query($sql);

$tasks = [];
while($row = $result->fetch_assoc()) {
    $tasks[] = $row;
}

$total_sql = "SELECT COUNT(*) as total FROM tasks";
$total_result = $conn->query($total_sql)->fetch_assoc();
$total_tasks = $total_result['total'];
$total_pages = ceil($total_tasks / $limit);

echo json_encode([
    "tasks" => $tasks,
    "total_pages" => $total_pages
]);
?>
```

Index.php

```
<!DOCTYPE html>
<html>
<head>
    <title>Daily Tasks with Pagination</title>
    <script src="https://code.jquery.com/jquery-3.6.0.min.js"></script>
    <style>
        body { font-family: Arial, sans-serif; margin: 20px; }
        h2 { color: #333; }
        ul { list-style-type: none; padding: 0; }
        li { padding: 8px; margin: 5px 0; background: #f4f4f4; border-radius: 4px; }
        #pagination a { margin: 0 5px; text-decoration: none; color: blue; }
        #pagination a.active { font-weight: bold; color: red; }
    </style>
</head>
<body>

<h2>Daily Tasks</h2>
<div id="task-list"></div>
```

```
<div id="pagination"></div>
```

```
<script>
```

```
$(document).ready(function(){
  function loadTasks(page=1){
    $("#task-list").html("<p>Loading...</p>");
    $.ajax({
      url: "tasks.php",
      type: "GET",
      data: { page: page },
      dataType: "json",
      success: function(response){
        let tasksHtml = "<ul>";
        $.each(response.tasks, function(index, task){
          tasksHtml += "<li>" + task.task_name + "</li>";
        });
        tasksHtml += "</ul>";
        $("#task-list").html(tasksHtml);

        let paginationHtml = "";
        for(let i=1; i<=response.total_pages; i++){
          let activeClass = (i === page) ? "active" : "";
          paginationHtml += "<a href='#' class='page-link '"+activeClass+"\" data-
page='"+i+"'>" + i + "</a> ";
        }
        $("#pagination").html(paginationHtml);
      }
    });
  }
});
```

```
loadTasks();
$(document).on("click", ".page-link", function(e){
  e.preventDefault();
  let page = $(this).data("page");
  loadTasks(page);
});
</script>
```

```
</body>
```

```
</html>
```

Output

Daily Tasks

Prepare Presentation

Fix Login Bug

Database Backup

Write Project Report

Team Meeting

Update Project Documentation

Review Pull Requests

Optimize SQL Queries

Client Follow-up Call

Deploy to Staging Server

1 2 3 4 5

Daily Tasks

Test New Features

Design Homepage UI

Security Audit

Debug API Endpoints

Monitor Server Performance

Create REST API

Check Error Logs

Write Unit Tests

Training Session with Team

Update Dependencies

1 2 3 4 5

Daily Tasks

Plan Sprint Tasks

Create Wireframes

Code Refactoring

Review Test Cases

Check Network Configuration

Fix UI Responsiveness

Write Blog Post

Demo for Client

Data Migration Task

Check System Security Patches

Implement Infinite Scroll by utilizing jQuery. scroll method.

Code

Index.php

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Infinite Scroll Tasks</title>
  <script src="https://code.jquery.com/jquery-3.6.0.min.js"></script>
  <style>
    body { font-family: Arial; margin: 20px; }
    .task { padding: 10px; border: 1px solid #ddd; margin-bottom: 6px; border-radius: 4px; }
    #loading { text-align:center; padding:10px; display:none; }
  </style>
</head>
<body>
  <h2>Daily Tasks</h2>
  <div id="taskContainer"></div>
  <div id="loading">Loading...</div>

<script>
$(function(){
  let offset = 0;
  const limit = 10;
  let noMore = false;
  let loading = false;

  function loadTasks() {
    if (loading || noMore) return;
    loading = true;
    $("#loading").show();

    $.ajax({
      url: "tasks.php",
      type: "POST",
      data: { offset: offset, limit: limit },
      success: function(html) {
        if ($.trim(html) === "") {
          $("#loading").text("☑ All tasks loaded");
          noMore = true;
        } else {
          $("#taskContainer").append(html);
          offset += limit;
          $("#loading").hide();
        }
      },
      error: function() {
        $("#loading").text("Failed to load tasks");
      },
      complete: function() {
```

```
        loading = false;
    }
});
}
```

```
loadTasks();
```

```
function autoLoadUntilScrollable() {
    if ($(document).height() <= $(window).height() && !noMore) {
        loadTasks();
        setTimeout(autoLoadUntilScrollable, 300);
    }
}
autoLoadUntilScrollable();
```

```
$(window).on("scroll", function() {
    if ($(window).scrollTop() + $(window).height() >= $(document).height() - 50) {
        loadTasks();
    }
});
});
</script>
</body>
</html>
```

Tasks.php

```
<?php
include "db.php";
```

```
$offset = isset($_POST['offset']) ? (int)$_POST['offset'] : 0;
$limit  = isset($_POST['limit']) ? (int)$_POST['limit'] : 10;
```

```
$sql = "SELECT id, task_name FROM tasks ORDER BY id ASC LIMIT $offset, $limit";
$result = $conn->query($sql);
```

```
if ($result && $result->num_rows > 0) {
    while ($row = $result->fetch_assoc()) {
        echo "<div class='task'>{$row['id']}. {$row['task_name']}</div>";
    }
} else {
    echo "";
}
```

Output

Daily Tasks

1. Prepare Presentation
2. Fix Login Bug
3. Database Backup
4. Write Project Report
5. Team Meeting
6. Update Project Documentation
7. Review Pull Requests
8. Optimize SQL Queries
9. Client Follow-up Call
10. Deploy to Staging Server
11. Test New Features
12. Design Homepage UI
13. Security Audit
14. Debug API Endpoints
15. Monitor Server Performance
16. Create REST API

36. Optimize Frontend Performance
37. Write SQL Stored Procedures
38. Push Code to GitHub
39. Setup CI/CD Pipeline
40. Conduct Code Walkthrough
41. Database Normalization
42. Research New Tools
43. Check Disk Space Usage
44. Bug Triaging Session
45. Review Design Mockups
46. Conduct User Testing
47. Prepare Monthly Report
48. Fix Session Timeout Issue
49. Validate Form Inputs
50. Conduct Knowledge Sharing Session

✓ All tasks loaded
