Topic:	Node JS Installation
Date:	23/09/2025

Objectives

- React JS installation
- Creating first React app
- Understanding JSX in React

Lab Tasks

Create a React app

npm create vite@latest lab4

```
C:\Users\Abdul Haseeb>npm create vite@latest lab4
> npx
> create-vite lab4
```

Select framework

```
* Select a framework:
  Vanilla
  Vue
  > React
  Preact
  Lit
  Svelte
  Solid
  Qwik
  Angular
  Marko
  Others
```

Select variant

```
* Select a variant:
  TypeScript
  TypeScript + React Compiler
  TypeScript + SWC
  > JavaScript
  JavaScript + React Compiler
  JavaScript + SWC
  React Router v7
  TanStack Router
  RedwoodSDK
  RSC
```

```
cd lab4
npm install
npm run dev
```

Practice JSX concepts present in manual and create a lab manual

Code

```
function App() {
  let course = "Web 2"

  return (
    <div>
      <h1>Hello class of {course}</h1>
    </div>
  )
}
```

export default App

Output

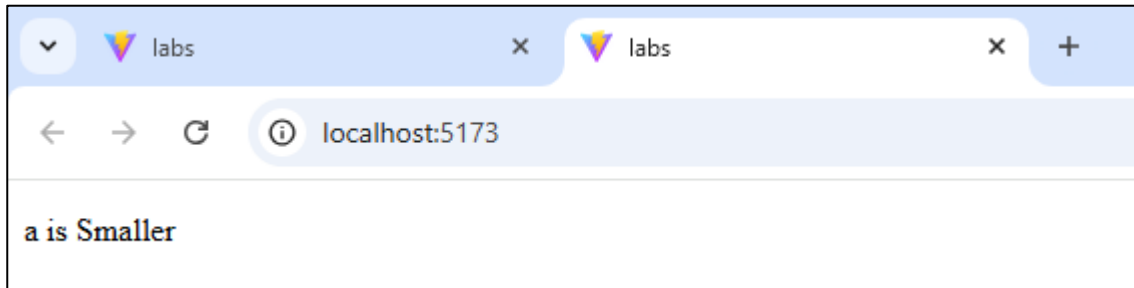

Code

```
function App() {
  const a = 5
  const b = 10

  return (
    <div>
      <p>{a > b ? "a is Greater" : "a is Smaller"}</p>
    </div>
  )
}
```

export default App

Output

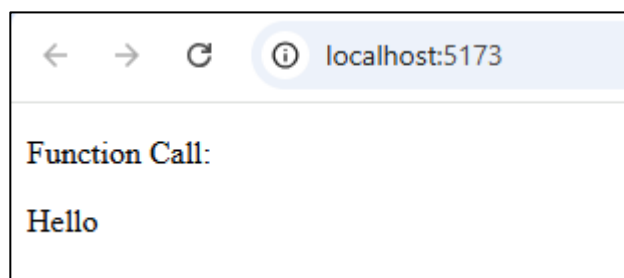

Code

```
const greet = () => {  
  return <p>Hello</p>  
}
```

```
function App() {  
  return (  
    <div>  
      <p>Function Call: {greet()}</p>  
    </div>  
  )  
}
```

export default App

Output

Create a simple Page in React. The page must include 3 pictures and a description of each picture in a paragraph

Code

```
function App() {
  return (
    <>
    <h1>My Favorite Places</h1>

    <div
      style={{
        textAlign: "center",
        fontFamily: "Arial, sans-serif",
        display: "flex",
      }}
    >
    <div style={{ marginBottom: "20px" }}>
      
      <p>
        This is a beautiful beach with golden sand and clear blue water.
        It's a perfect place to relax and enjoy sunsets.
      </p>
    </div>

    <div style={{ marginBottom: "20px" }}>
      
      <p>
        These are stunning snow-covered mountains. Hiking here feels like an
        adventure into nature's purest form.
      </p>
    </div>

    <div>
      
    <p>
      This is a breathtaking city skyline at night. The glowing lights and
      tall buildings show the beauty of modern architecture.
    </p>
  </div>
</div>
</>
)
}

```

export default App

Output

Create a webpage to calculate and display your age in days using a js function.

```
import { useState } from "react"
```

```

function App() {
  const [dob, setDob] = useState("")
  const [ageInDays, setAgeInDays] = useState(null)

  const calculateAgeInDays = (dob) => {
    const birthDate = new Date(dob)
    const today = new Date()

```

```
const diffTime = today - birthDate

const diffDays = Math.floor(diffTime / (1000 * 60 * 60 * 24))
return diffDays
}

const handleSubmit = (e) => {
  e.preventDefault()
  if (dob) {
    setAgeInDays(calculateAgeInDays(dob))
  }
}

return (
  <div
    style={{ textAlign: "center", marginTop: "50px", fontFamily: "Arial" }}
  >
    <h1>Age Calculator</h1>
    <form onSubmit={handleSubmit}>
      <input
        type="date"
        value={dob}
        onChange={(e) => setDob(e.target.value)}
        required
        style={{ padding: "8px", marginRight: "10px" }}
      />
      <button type="submit" style={{ padding: "8px 16px" }}>
        Calculate
      </button>
    </form>

    {ageInDays !== null && (
      <p style={{ marginTop: "20px", fontSize: "18px" }}>
        Your age in days is: <b>{ageInDays}</b>
      </p>
    )}
  </div>
)
}

export default App
```

Output

Age Calculator

Calculate

Your age in days is: **8675**
